ESET Endpoint Security for Android protects your business from malware infections, intercepts unwanted phone calls and filters SMS/MMS spam to minimize data loss risk. It enables your IT manager to remotely monitor and control the security level of your Android smartphones/tablets, without the cost and complexity of a Mobile Device Management solution. ESET Endpoint Security for Android helps your business respond to the "consumerization of IT" while maintaining control over data and device usage. Security logs provide details for compliance reporting and can be used to enforce custom policies on Android mobile devices to reduce your business's security risk.

ENDPOINT PROTECTION

On-access scanning	Advanced scanning protects company smartphones and tablets from threats attempting to access the system via Bluetooth or Wi-Fi.
On-demand scanning	On-demand scanning provides reliable scanning and cleaning of integrated memory and memory cards. Scanning of specific folders is also supported.
Remote administration	Enables you to check the security status of your smartphone fleet, run on-demand scans, push security policies and set uninstall password. Get overview of the platforms, OS versions and other information and stay up-to-date on your smartphones' security. Set up primary and secondary server credentials as a backup.
Administrator message	Allows administrator to push a message to the device with custom text via ESET Remote Administrator. The message priority can be set to normal, warning or critical warning.
SIM matching* **(GSM device only)**	Sets monitoring parameters for approved SIM cards. Matches or ignores SIM cards as a way to prevent unauthorized use.
Call blocking*	Blocks calls from unknown or hidden numbers and also calls to unwanted numbers. Keep your phone and data plan costs under control.
Password protection	Protects ESET security against removal by unauthorized users. Enables you to password-protect individual ESET security modules and restrict user access. Provides application protection to prevent unauthorized viewing, tampering with the settings or inadvertent uninstallation which would leave the device less protected.
SMS/MMS antispam *	Filters out unwanted SMS/MMS messages. Allows you to block all unknown numbers.
Real-time protection	Protects all applications, files and memory cards with the ESET NOD32 proactive technology optimized for mobile platforms.
Security audit	An on-demand security audit checks the status of all vital phone functions, including battery level, Bluetooth status, home network, disk space and running processes.

* Not available for tablets which do not support calling and messaging.
